

Turning Women's Pain into Precision Healthcare Data

ENDOless: Because women's pain deserves answers.

Empowering 190 M women, fueling €1 T+ in women's health research

Why ENDOless?

Because no woman should ever have to choose between enduring pain and living her life

- Dismissed pain: Doctors told me "this is just what being a woman feels like," as I battled years of exhaustion, brain fog, and chronic pelvic pain
- Late diagnosis: After a 16-year diagnostic delay, I learned my organs were fused by endometriosis
- Mission born: I left corporate life to build the platform I needed — where women's pain is seen, measured, predicted, and finally believed

ENDOless exists because I — and millions of women — have finally had enough.

Endometriosis drains €280 Bn a year – and still takes 7 years to diagnose

Take action now to capture a €1 trillion GDP opportunity by 2040****

10k€ Lost per employee***

11-14 lost work-days per year***

€280 Bn
global productivity loss**

75 million DALYs
= 9 healthy-life years lost per woman**

*Global prevalence and incidence of endometriosis: a systematic review." Fertility and Sterility, 2013.
**World Health Organization (WHO) – "Economic Impact of Women's Health Issues," 2020.
***Lancet Global Health, 2022 – "Economic Burden of Chronic Pain Disorders."
****World Economic Forum & McKinsey Health Institute. (2024). Closing the Women's Health Gap: A \$1 Trillion Opportunity to Improve Lives and Economies.

I went to doctors for 25 years before anyone believed me. They kept saying it was in my head.
— User, 42

Period-tracking apps feel like shouting into the void. I log everything and get nothing back
— Beta tester, 29

I photograph every flare-up because once the pain eases I start doubting myself.
— Beta tester, 28

'It's just your period,' the doctor said. Two days later I was in renal failure.
— Patient, 36

"It's Not Just Cramps"
— *Voices from the Community*

Problem: Women's pain is ignored – and the cost is colossal

Underdiagnosis and outdated care cost billions and careers

Systemic failures

Real consequences

- 9 years** lost in poor health
- < 2 %** of medical research funding is allocated to these issues
- 70 %** of people suffering from chronic pain are women
- 80 %** of clinical studies are conducted on men

Career & revenue

50% higher risk of professional dropout

Mental health

2x more likely to suffer from **anxiety** and **depression**

Average diagnostic delay

7 - 10 years

ENDOless is user-centric app which captures high-resolution wearable data + AI symptom Engine

Capture & Contextualize

Predict & Act

Empowering women with chronic pelvic pain to see the unseen, anticipate the unpredictable, and partner in their care.

The solution:

ENDOless: A smart companion designed for real-world pain.

Today Data is

Ignored

Women's pain is dismissed.
No one sees what they live.

Outdated

Apps miss the complexity.
Data stays useless.

Fragmented

No link between symptoms,
care, and research.
Everyone flies blind.

DTx-grade predictive care ▪ Empowered patients ▪ Inclusive research

For Women

Track what matters, get daily
insights, and communicate
better with doctors

Predict flare-ups, see patterns,
and take control

Feel seen, heard, and
empowered

*From invisible suffering to
body literacy and control*

For Companies

Offer smarter support, reduce
absenteeism, and improve
employee wellbeing

Strengthen DEI, mental health,
and care access strategies

Become a visible leader in
women's health

*From invisible pain to measurable
impact on people and performance*

For Research

Access high-resolution, real-
world symptom data for
discovery & trials

Run decentralized studies with
pre-consented cohorts

Designed for regulatory-grade
collaboration — HDS-compliant
architecture

*From scattered logs to
clinical-grade insights at scale*

Privacy-first architecture

Structured symptom data

Personalized AI

Cloud-scalable infrastructure

Turning Women's Pain
into Precision
Healthcare Data

ENDOless

A Non-Invasive Revolution in Diagnosis

We track clinically relevant signals

- Autonomic regulation (HRV ↓) – early nervous system dysregulation
- Circadian rhythm disruption – irregular sleep and temperature
- Stress recovery impairment – slower post-effort recovery

Diagnostic Performance[☆]

- Sensitivity: 93% – correctly identifies affected individuals
- Specificity: 95% – correctly rules out those unaffected
- ROC AUC: 0.94 – excellent overall accuracy

ENDOless identifies early physiological shifts linked to chronic conditions through wearable + behavioral data, avoiding delays and invasive procedures.

[☆]Current model trained on endometriosis dataset; adaptable to other conditions.

ENDOless

Prediction & Personalization of Care

Anticipate flare-ups, adapt support — up to 72 hours in advance

Early digital biomarkers detected via wearable & behavioural data

- Heart Rate Variability (HRV) ↓ — nervous system dysregulation
- Sleep patterns — delayed onset, frequent waking
- Physical activity — sudden drop from personal baseline
- Body temperature — abnormal fluctuations

👉 These physiological shifts signal crisis onset across multiple conditions (e.g., endometriosis, PMS, fibromyalgia, PCOS, long COVID...)

Personalized therapy engine adapts to each woman's profile

- Individual phenotype (symptom signature)
- Cyclic patterns (menstrual, circadian, behavioral)
- Personal triggers (stress, food, sleep, activity...)
- Response to treatments (lifestyle, pharma, complementary care)

Visual Pain Summary (This Week)

Good days: 2 Mild days: 3 Tough days: 2

More good days this week compared to last week! 🎉

Pain Trend (This Week)

This week feels: 😊 to 😬

Common Triggers

Based on your logged symptoms and lifestyle factors

Market matrix

Our Moat

Designed from day one for GDPR-grade consent, anonymization & exportability

Predictive Pain Intelligence

- AI models forecast flare-ups 24h in advance with 75% accuracy
- Early warnings allow preventive action, reducing intensity and missed work

Holistic Data Fusion

- Combines 15+ symptom dimensions with wearable signals (HRV, sleep, activity)
- Context-aware data → richer personalization and real-world clinical relevance

Patient-to-Research

- Daily app usage fuels research-ready data sets
- RaaS model gives pharma & clinicians access to validated insights, not raw logs

Why AI Matters in Health Equity

Economic risk – Biased AI = flawed predictions → wasted R&D & liability costs.

Regulatory risk – EU AI Act (2025) will require bias audits for “high-risk” health AI.

Business opportunity – Inclusive AI earns patient trust, insurer confidence, and market leadership.

Bias in → Bias out

80 % of health-AI datasets
come from men

Result →

Algorithms misdiagnose
women

Your Challenge: Design Bias-Aware AI for ENDOless

Ethical Advantage

How can fairness become ENDOless's differentiator?

Impact Proof

Which KPIs show that inclusive design drives profit + purpose?

Market Fit

How could bias-aware AI attract hospitals, insurers, or users?

AI Governance

What rules, metrics, or partners ensure transparency & trust?

Reclaim the day – not just record the pain
